## **INTRODUCTION**

### **1. PURPOSE**

This document schedules specifications in accordance with Appendix B of AFPM Exhibit 61-1.

A single source is provided by this document for a complete listing of Boeing prepared system, subsystem and equipment specifications currently required for the WS-133B Weapon System. Schedules for submittal of these specifications to the customer are a part of this listing. This document will be revised quarterly to reflect changes in equipment requirements and specification submittal schedules.

### **2. SCOPE**

Listed in this document are specifications, in the categories noted below, applicable to CTL/CTLI equipment and operational equipment of the Wing VI configuration. Included is an index of all specifications for Wings I, II and III which are unchanged in Wing VI. The appropriate reference to a page in D2-9143 WS-133A Master Specification Index The Boeing Company is included where specification information on a Figure 2 form may be found. Where no "Part" is designated, it is an indication that the noted Page Reference is in Part I of D2-9143. Specifications will be listed only once on the Figure 2 forms. The following categories of specifications are included in this document:

- a. System and Subsystem Specifications
- b. Operational Ground Equipment (OGE) Specifications - R&D
- c. Maintenance Ground Equipment (MGE) Specifications - R&D
- d. Airborne Instrumentation Subsystem Specifications - R&D
- e. Airborne Missile Equipment Specifications
- f. Combat Training Launch Instrumentation (CTLI) Airborne Equipment Specification

The data contained in this document is listed on Figure 2 forms in accordance with Appendix A of AFPM Exhibit 61-1, "Minuteman Specification Program", dated 15 January 1962 and Appendix E of AFPM Exhibit 61-1, dated 15 March 1963. The following information is provided on these forms:

## 2. SCOPE (Continued)

- a. Heading: Identifies the "heading" from the Series of Equipment Specifications in the lower horizontal tier of the Specification Tree under which all listed equipment falls. Also identified is the appropriate horizontal tier on the Specification Tree where System and Subsystem Specifications are depicted.
- b. Sequence Number: The consecutive numbering of items of equipment that have been identified as falling under the "heading" appearing on that page. NOTE: Decimal numbers following the basic sequence number of Requirement Specifications denote additional GFP items which are included in the specification.
- c. Item Nomenclature: Approved nomenclature and approved "type designators" for the Figure A item will appear in this column. In the absence of approved nomenclature, the nomenclature that appears on the Figure A forms will be included. Approved "type designators" appearing in the nomenclature column indicate that the nomenclature is approved.
- d. Figure A Number: The items of equipment called out on the Figure 2 forms are based on the Figure A's for the Launch Operational System (S-133-110-0-6), the Ground System (S-133-2110-0-6), and the SMSB (S-133-120-0-6).
- e. S-133 Specification Number: Specification numbers for items of equipment are assigned to be compatible with the "Specification Series" number in the "heading" on the particular Figure 2 form where that item is initially called out. Where an identical piece of equipment is used under another heading, the specification number will be listed and an appropriate reference will be made to the page where that item initially appeared. Schedules will appear only with the initial listing of the item, however. More than one Figure A item may be covered under one Requirement Specification number. Required data is listed for each Figure A covered, with the exception that specification submittal schedules are listed only once. Other Figure A items covered by this specification will reference the page on which the specification schedule appears.
- f. Part Number: Contractor or subcontractor's part number assigned for the item of equipment covered by the specification. Entries will be made in this column only for specifications that have received final approval.
- g. Responsibility: Name of contractor responsible for preparation of specification.

NOTE: "B" indicates The Boeing Company.

## 2. SCOPES (Continued)

- h. Class of Equipment: The class of equipment (E.G., OGE, MGE, and CTLE) is identified in this column.
- i. Type of Specification: The type of end-item equipment specification, i.e., Model, Identification, Requirement or Contractor Format, is identified by entering an "X" in the appropriate column under this heading.
- j. Specification Submittal Schedules: Specification submittal schedule column usage is in accordance with AFPM 61-1.

**INITIAL RELEASE**: This column is used to note the date that the Critical Design Review Data Package will be delivered to BSD for review, coordination, comments and/or approval.

**DRAFT**: This column is used to note a date normally 3 weeks after receipt of SCGD but no earlier than 2 weeks after design freeze. This date reflects a requirement and is not intended to reflect a specification submittal.

**FINAL APPROVED**: This column will be used to note the date at least 30 days prior to the first delivery of production hardware or the definitized production contract, whichever is first. This date reflects a requirement and is not intended to reflect a specification submittal.

- k. Remarks: Explanation of information or symbols appearing in the "Remarks" column is as follows:

D2-XXXX Indicates Boeing Document Number

AU/NS Indicates "Figure A Contractually Authorized, but Scheduling Not Complete"

## 3. GENERAL

Specifications are identified as to type in the Table of Contents as follows:

- a. "M" Indicates Model Specification
- b. "I" Indicates Identification Specification
- c. "R" Indicates Requirements Specification
- d. "CF" Indicates Contractor Format Specification
